CAPILANO UNIVERSITY

Interaction Design Diploma

Design your career in tech

The two-year Interaction Design diploma at CapU connects design and technology, preparing you for an exciting career in tech. As an interaction designer, your combination of creativity, problem-solving, and human-centred design skills helps you thrive in the AI-augmented world of digital product design.

Learn in a project-based environment

You'll be training in a hands-on, experiential environment. Our program structure is unique, featuring small class sizes that ensure high levels of peer support and faculty attention. Courses are taught by faculty from the local design community and apply the same programs and tools working professionals use.

Build your network

Before graduation, you'll complete the Interaction Design Capstone project, an opportunity to combine the research, theory and technical skills that will make industry employers take notice. You'll also test your skills by completing a practicum in a professional design environment.
