

# Bachelor of Environment & Society

Environmental Studies

# Become a catalyst for change

Change-makers who understand the value of creating sustainable solutions that benefit humans and their environment are needed. In the Bachelor of Environment & Society (Environmental Studies) degree at CapU, you'll gain the skills to make an impact.

## Start with the fundamentals

You will spend the first two years of the program building your knowledge in key areas of environmental research, with courses in anthropology, biology, ecology, economics, geography, politics, history, Indigenous cultures, ethics and statistics. One option is to start studying with a diploma in Environment and Society (Environmental Studies) then seamlessly move into the bachelor's degree program for greater specialization.

## Move into your specialty

In the upper levels of the program, you'll choose from different modules such as: applied ecology, climate change mitigation and adaptation, urban sustainability or biodiversity and conservation. Each module consists of four courses and will add depth and breadth to your degree as you prepare to enter the workforce.

## Career paths

- Environmental planner
- Emergency preparedness consultant
- GIS/mapping technician
- Land use planner
- Municipal planner
- K-12 teacher
- Policy analyst
- Social sciences researcher
- Sustainability, transportation systems & waste management consultant
